AI Tools for Project Management

TRAINER PROFILE

Trainer Kheng Yee

- HRDC Accredited Trainer
- M.Sc. in Analytics, Georgia Tech, USA
- 6 years of Industrial Experience in AI & Data Science
- Trainings focused on AI, Machine Learning, Python, SQL, Data Analytics, and Data Visualization.

Professional Experience Highlights

Consulting

Led development of AI-powered learner engagement systems for an education institution. Contributed to public sector projects by applying advanced analytical models.

Media

Built AI/machine learning models to identify audience segments, enabling the shift to addressable TV advertising.

Banking

Developed machine learning models for banking products and optimized lead quality through model overlay techniques.

Professional Certificates

HRDC Accredited
Trainer

AWS Certified
Cloud Practitioner

Salesforce Certified
Tableau Desktop
Foundations

Google Cloud
Certified Cloud
Digital Leader

Attendance

- Class ID: 58400

Workshop Overview & Learning Objectives

3-Day Workshop Structure & Goals

- Automate repetitive PM tasks with AI
- Use AI for meeting documentation & summaries
- Enhance team collaboration via AI tools
- Conduct interactive AI-driven training
- Apply AI to real-world PM challenges

AI in Everyday Life

Popular GenAI Tools

GenAI vs Agentic AI

Introduction to AI in Project Management

What is AI & Its Role in Modern PM?

Artificial Intelligence is transforming how project managers plan, execute, and report. By automating repetitive tasks, enhancing decision-making with data-driven insights, and enabling smarter communication, AI delivers measurable gains in productivity, accuracy, and project outcomes.

AI Note-Taking & Meeting Summarization

1 Automatic Transcription & Summary Generation

AI tools automatically transcribe meetings in real time and generate concise, structured summaries. Key decisions and discussion points are captured accurately, eliminating manual note-taking and ensuring nothing is missed.

2 Action Item Extraction & Assignment

AI identifies action items from meeting conversations and automatically assigns them to relevant team members. Deadlines are tracked and reminders are sent, keeping projects on schedule without manual follow-up.

Real-Time Transcriptions, Translations & Sentiment Analysis

AI delivers high-accuracy transcription across, enabling seamless multilingual meetings.

Microsoft 365 Copilot

- <https://m365.cloud.microsoft/>
- Requires Microsoft 365 subscription
- Deep integration with Office apps

Copilot (Consumer)

- <https://copilot.microsoft.com/>
- Built into Windows and Edge
- Web-based answers

Microsoft 365 Copilot vs Copilot Chat

Feature	Microsoft 365 Copilot (BizChat)	Copilot Chat (Consumer)
Access	Requires Microsoft 365 Work/School account	Available to anyone
Data Sources	Work files, emails, meetings	Web search, general chat
Security	Enterprise Data Protection (EDP)	No EDP
UI Experience	Business-focused	More vibrant and conversational

Meeting Prompt Guide

Transcription & summary prompts

- Give me a summary of this meeting in bullet points, grouped by topic.
- Show me the full transcript of this meeting.
- Translate the meeting transcript into Bahasa Malaysia.
- Summarise the meeting in Bahasa Malaysia.

Action items & follow-ups

- List all action items from this meeting with the owner and deadline for each.
- What are the most time-sensitive tasks from this meeting?
- What did each of the attendees commit to do after this meeting?
- Was a next meeting date agreed? If so, what was it?

- **Decisions & risks**

- What key decisions were made in this meeting?
- What risks or blockers were discussed? How were they resolved?
- Were there any unresolved questions or open issues at the end of the meeting?

Meeting Prompt Guide

Draft emails & documents

- Draft a follow-up email from Sara to all meeting participants summarising the key points and action items.
- Draft an escalation email to the IT manager about the delayed penetration test, based on what was discussed in the meeting.
- Create meeting minutes in a formal format including attendees, agenda, discussion points, decisions, and action items.
- Write a short project status update suitable for sending to the steering committee based on this meeting.

Meeting Prompt Guide

Live Catch-up

- What have I missed so far?
- What has been discussed in the last 10 minutes?
- What decisions have been made before I joined?
- Has my name been mentioned?
- What is currently being discussed?

Sentiment analysis

- What was the overall tone of this meeting?
- Did any part of the meeting seem tense or uncomfortable?
- Was there disagreement between the participants at any point?
- Did the meeting end on a positive note?

Automating Task Management & Follow-Ups

1

AI Task Creation from Meeting Notes

AI tools automatically extract action items from meeting transcripts and convert them into tasks. Automated reminders are sent to assignees, ensuring accountability and reducing manual follow-up efforts across the project team.

2

Deadline Tracking & PM Software Integration

AI monitors deadlines, flags at-risk tasks, and syncs seamlessly with project management platforms. Real-time updates and predictive alerts help teams stay on track and respond proactively to scheduling conflicts.

Email Prompt Guide

Draft emails & documents

- Draft a follow-up email from Sara to all meeting participants summarising the key points and action items.
- Draft an escalation email to the IT manager about the delayed penetration test, based on what was discussed in the meeting.
- Create meeting minutes in a formal format including attendees, agenda, discussion points, decisions, and action items.
- Write a short project status update suitable for sending to the steering committee based on this meeting.

Email Prompt Guide

Writing style replicator

- I have a sample recap email below. Analyse its format, tone, writing style, sentence structure, and level of formality. Then write a reusable prompt that I can use to instruct you to generate a new recap email in exactly the same style for a different meeting.
- Analyze the following text, and give me a set of instructions I can use to write exactly in the same tone, writing style, reading level and delivery.

AI-Powered Meeting Exercise

- Upload the meeting recording to Otter AI.
- Generate and review the transcript.
- Translate the transcript into Japanese.
- Create meeting minutes summarizing discussions and decisions.
- Extract action items, owners, and due dates.
- Identify project risks, issues, and dependencies.
- Generate a 100-word executive summary.
- Draft a follow-up email to meeting participants.

Automating Executive Summaries & Risk Management

1 Quick Project Status Summaries for Executives

AI tools instantly compile project data into concise executive summaries, highlighting milestones, budget status, and key decisions. Leaders receive accurate, real-time updates without manual report preparation.

2 AI Detection & Categorization of Risks/Issues

AI continuously monitors project communications and data to detect, categorize, and prioritize risks and issues. Early alerts enable proactive mitigation before problems escalate.

AI-Generated KPI Dashboards & Status Reports

1

AI for Dashboarding

AI aggregates project data instantly, enabling executives and managers to monitor performance metrics, track milestones, and identify bottlenecks without manual data entry.

2

Automated Weekly & Monthly Status Reports

Automate the generation of weekly and monthly status reports with AI-driven data visualization. Reduce reporting time significantly while delivering clear, accurate, and visually compelling reports tailored for stakeholders.

AI for Resource Allocation & Scheduling

1 Workload Balancing & Resource Assignment

AI analyzes team capacity and project demands to predict workload imbalances before they occur. It recommends optimal resource assignments based on skills, availability, and project priorities — reducing burnout and maximizing team efficiency.

2 Scenario Planning with AI Forecasting

AI-powered forecasting enables project managers to model multiple scheduling scenarios and evaluate trade-offs in real time. Predictive analytics surface potential bottlenecks and timeline risks, empowering data-driven decisions for resource planning.

AI Chatbots & Interactive Training Materials

1 Chatbots for Internal Project Support & Q&A

Deploy AI chatbots to answer team questions instantly, retrieve project documentation, escalate issues, and provide 24/7 support — reducing bottlenecks and improving response times across the project lifecycle.

2 Generating Interactive Content & Adaptive Learning

Use AI to create personalized training modules that adapt to each learner's pace and knowledge level, delivering quizzes, scenarios, and feedback that improve engagement and knowledge retention.

AI Agents vs. Traditional Prompt-based AI

Understanding the shift from reactive tools to proactive autonomous assistants.

Prompt-based AI

The Analogy

Asking a Colleague a Question

"Hey, what is the capital of France?"

Interaction Model

One-time Q&A

You provide full context. It gives one answer.

Behavior

Reactive

It waits for your specific command to act.

Outcome

Single Text Response

Great for drafts, definitions, and summaries.

VS

AI Agents

The Analogy

Hiring an Assistant for a Role

"Plan my travel to Paris and book the hotels."

Interaction Model

Multi-step Autonomous Work

It plans steps, uses tools, and iterates on goals.

Behavior

Proactive

Can ask clarifying questions and take initiative.

Outcome

Complete Project Ownership

Ideal for research, workflows, and monitoring.

Takeaway: While prompt-based AI helps you *do a task* faster, AI Agents help you *achieve an outcome* by managing the process for you.

Creating Your Own AI Agents

ChatGPT

Gemini

Copilot

What is n8n?

- No-code/low-code workflow automation platform
- Connect apps, APIs, and AI into one flow

Nodes in n8n

A **node** is a single building block in an n8n workflow, each performing a specific job like triggering an event or processing data.

Flow

Building Blocks of an AI Agent

- Goals
- Rules
- Memory
- Tools
- Data

Goals

- A *goal* is the final outcome you want the agent to achieve.

Examples

- “Book a dental appointment for the customer.”
- “Prepare the weekly sales summary.”

Rules

- Rules control the agent's behaviour.
- Rules = traffic laws for the agent.
- They prevent chaos, mistakes, or incorrect actions.

Examples

- “Only schedule appointments between 9am–6pm.”
- “Do not send reminders to VIP customers.”

Memory

- Memory helps the agent behave consistently and intelligently.
- Agents do not “magically know everything.” They must be *given* data.

Examples

- Short-Term Memory
- Long-Term Memory
- External Memory (Databases/Sheets/Notes)

Tools

- Tools allow the agent to interact with the real world.
- Data Tools, Communication Tools, Scheduling Tools etc

Data

- Agents need accurate and clear data.
- If any item is missing → agent gets confused or stops.

Example (Scheduling Agent):

- Customer name
- Preferred date
- Available dentists
- Opening hours
- Contact details

AI Knowledge Bases, FAQ Automation & Video Summaries

Automating Documentation & Enhancing Retention

Automate documentation and FAQs with AI to reduce manual effort. Use speech-to-text tools to create video training recaps, and leverage AI-generated summaries to boost knowledge retention across your project teams.

Future Trends in AI for Project Management

Emerging Trends & Outlook

- Increasing AI adoption and deeper integration across PM workflows
- Advances in natural language processing and intelligent automation
- AI ethics, governance, and responsible use in project management
- Preparing for AI's evolving and expanding role in PM practices

Thank You!

Course Evaluation

- Class ID: 58400
- <https://feedback.iveron.com.my/ifs>

Appendix

Structure of A Prompt

- The task (what you want)
- The context (background information)
- The format (table, email, summary)
- The tone (formal, simple, friendly)
- The constraints (word limit, no assumptions)
- The input (excel file, photo, screenshot)

Scenario 1

A customer service officer wants to reply to a customer politely but doesn't know how to phrase it professionally.

Bad Prompt: “Help me write an email.”

Scenario 1

- **Task:** Rewrite my message into a professional customer service email.
- **Context:** I'm responding to a customer who complained about slow delivery.
- **Tone:** Polite, empathetic, and professional.
- **Format:** Short email.
- **Constraints:** Keep it under 120 words. No promises of guaranteed delivery.
- **Input:** Client's email: "My parcel still hasn't arrived. This is very slow. What's happening?"

Chain-of-Thought Prompting

- “Explain your reasoning step-by-step.”
- “Think through this like a checklist before answering.”
- “First list your reasoning, then give your final answer in one sentence.”
- “Show how you arrived at the conclusion.”

Chain-of-Thought Prompting

No CoT:

“What is 24×17 ?”

CoT:

“What is 24×17 ?

Show your calculation step-by-step before giving the final answer.”

Role-based Prompting

Role-based prompting means you **assign a role** to the AI so it knows *how to think, what expertise to use, and how to behave* before completing the task.

Role-based Prompting

Prompt: “Act as a **Relationship Manager**. Write the message in a polite and reassuring manner suitable for a customer.

Message from Customer: ‘Why is my loan taking so long?’”

Role Options (you can swap):

- Customer Service Representative
- HR Executive
- Technical Support Agent
- Professional Writer

Few-Shot Prompting

Example 1:

Original: “Send me the report now.”

Friendly: “Could you please share the report when you have a moment?”

Example 2:

Original: “You didn’t follow the instructions.”

Friendly: “I noticed a few steps were missed, can we review them together?”

Now rewrite this using the same friendly style:

Original: “Your form is incomplete.”

Using Templates & Placeholders

- Allow you to create **standardized prompts** that are easy to reuse, share, or scale.
- **Why?** Ensures consistency.

Using Templates & Placeholders

Act as a Business Analyst.

Generate a Monthly Sales Performance Report using the data below.

Structure:

1. Executive Summary (3 to 4 lines)
2. Key Highlights (3 pointers)
3. Challenges / Risks
4. Opportunities
5. Recommendations for Next Month

Placeholders:

- Month: [MONTH]
- Total Sales: [TOTAL_SALES]
- Growth: [GROWTH]
- Top Product: [TOP_PRODUCT]
- Lowest Product: [LOWEST_PRODUCT]
- New Customers: [NEW_CUSTOMERS]
- Lost Customers: [LOST_CUSTOMERS]

Constraints:

- Professional tone
- 200–250 words
- No assumptions outside the data provided

AI-Assisted Prompting

- “Review the response you just generated and check whether any improvements are needed.”
- “Help me write a prompt to do task A.”

Techniques to reduce hallucination

- “verify this”
- “cite source”
- “check alignment”
